

Future Energy Pty Ltd

Environmental Policy

Future Energy Pty Ltd is a community wind farm development company that is committed to realising renewable energy projects through sustainable practices.

Future Energy values our environment and insists on accountable reporting from its staff, consultants and contactors in order to ensure sustainable and environmentally sensitive outcomes.

Future Energy company activities will be conducted in a manner that minimises risk to public health and safety. Further, Future Energy believes that natural resources can be developed and utilised in a manner consistent with proper stewardship for the environment.

Therefore, recognising that all activities associated with the development of our sustainable resources impact the environment, our projects will be designed and managed to reasonably minimise risk and mitigate negative impacts to the environment. Future Energy will strive to assure that its activities are conducted in compliance with the applicable laws and regulations.

Principles:

- ❑ Utilisation of the earth's natural resources is fundamental to the survival and prosperity of any organism or society, including man and his activities.
- ❑ Harnessing of natural resources from one environment to utilisation in another will impact both environments to some degree.
- ❑ Individuals as well as organisations of individuals should demonstrate respect for and concern with our environment.
- ❑ As stewards of the environment, individuals as well as organisations should strive to minimise or mitigate the impacts of resource utilisation to the extent reasonably feasible.
- ❑ Sound science should be the basis of environmental impact evaluation and mitigation.
- ❑ To conserve resources used by the Company in the execution of the Company's business including the maintenance of effective energy conservation strategy.

Implementation:

- ❑ Project planning, development and implementation will include consideration of alternatives and mitigation to reduce negative impacts to the environment.
- ❑ Costs for compliance with regulatory requirements, minimisation and mitigation of environmental impacts, closure and reclamation will be included in project evaluations.

- ❑ Future Energy will continue to seek, evaluate and use, when appropriate, new technologies and methodologies that enhance our ability to conduct our operations in a manner that reduces environmental impacts.
- ❑ To the extent technically feasible, Future Energy will minimise the generation of greenhouse gas emissions.
- ❑ Conservation of both renewable and nonrenewable natural resources will be considered in all of Future Energy's activities.
- ❑ Future Energy will continue its record of being community oriented. Socioeconomic factors will be included in the evaluation of all projects of significant capital cost.
- ❑ Compliance with environmental laws and regulations and minimisation of environmental impacts rests with the operation. To implement the environmental policy of Future Energy, each operation will provide awareness training for employees
- ❑ Future Energy will maintain suitable staffing to address environmental requirements and will routinely evaluate the effectiveness of their environmental program. Future Energy ensure all staff are aware of their responsibilities relating to environmental management and that each employee/contractor has, and maintains, the appropriate level of competency.
- ❑ Future Energy will provide appropriate Environmental training to relevant staff to ensure proper operation of the Environment Management System.
- ❑ Future Energy will continually improve and review the Company's environmental performance and the environmental management system itself.
